DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-54 and 63-64, drawn to "method for searching a peer-to-peer computer network comprising collecting data about a plurality of computer within the network, including a network location of each of plurality of computers; selecting at least one computer to be selected computer based on the collected data; and routing a search query from a user to the selected computer..." classified in class 709, subclass 224.
 - II. Claims 55-62 , drawn to " method from optimizing a computer's access to information, the method comprising maintaining a first database which includes status information about a plurality of computers within a network; maintaining a second database which includes content information about the plurality of computers within the network; filtering the content information in second database... accessing at least one computer..." classified in class 707, subclass 10.
2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as method for searching a computer network by monitoring information related to a plurality of computers, classified in a *different Class/Subclass*. And invention II has a

Art Unit: 2155

separate utility such as method for optimizing a computer's access to information by maintaining and/or managing a plurality of databases See MPEP § 806.05(d).

3. The inventions are distinct, each from the other because of the following reasons:

(a) these inventions have required a separate status in the art as shown by their different classifications.

(b) the search required for each group is different and not co-extensive for examination purposes.

For example, the searches for the inventions would not be co-extensive because these Groups would require different searches on PTO's classification class and subclass as following:

The Group I search (1-54 and 63-64) would require use of search **Class 709, Subclass 224** (not require for the invention II).

The Group II search (55-62) would require use of search **Class 707, Subclass 10** (not require for the invention I).

For the reason given above restriction for examination purposes as indicated is proper.

4. A telephone call was made to Albert S. Penilla on September 02, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Oanh L. Duong whose telephone number is (703) 305-0295. The examiner can normally be reached on Monday- Friday, 8:00AM - 5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hosain T. Alam can be reached on (703) 308-6662. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-3900.
